

UCA Department of Chemistry Seminar

March 1, 2013 2:00 pm Laney 104

Charles Nichols
University of Colorado

Gas-Phase Ion Chemistry: From UCA to Graduate School

Ions are important in atmospheric, interstellar, combustion, solution, and plasma environments. Through novel techniques in mass spectrometry, we can probe reactions to gain insight into the kinetics and thermochemistry of ions and their neutral counterparts. I will compare the techniques I am using in graduate school to those used here in William S. Taylor's lab.
