(B) If $A$ is a $5 \times 4$ matrix and $\vec{b}$ a nonzero vector such that $A \vec{x}=\vec{b}$ has infinitely many solutions, what is the minimum possible number of zero rows $A$ has after it is row-reduced?
(C) Let $A$ be a $2 \times 2$ invertible matrix. How many solutions does $A \vec{x}=\left[\begin{array}{l}0 \\ 2\end{array}\right]$ have?
(D) Let $A$ be a $3 \times 3$ invertible matrix and $B$ a $3 \times 3$ singular matrix. What is the dimension of the row space of the augmented matrix $[A \mid B]$ ?
